git_branch_consolidation_docs_organization

Git Branch Consolidation & Documentation Organization Complete

Successfully completed the Git repository reorganization and documentation consolidation for the H1B Friendly Jobs project:

Key Accomplishments:

1. **Git Branch Management**: Merged and consolidated `master` and `main` branches, keeping `main` as the single working version with all latest features and code

2. **Documentation Organization**: Moved all 22 markdown documentation files from the workspace root to the `/docs/` folder

3. **Repository Cleanup**: Deleted the redundant `master` branch both locally and remotely

4. **Documentation Index**: Created a comprehensive README.md index in the docs folder categorizing all documentation by type (Setup, Technical, Testing, etc.)

Final Repository Status:

- **Single clean branch**: `main` contains all latest code and documentation

- **Organized structure**: All technical documentation consolidated in `/docs/` folder

- **Essential files preserved**: README.md, CHANGELOG.md, and LICENSE kept in root

- **GitHub updated**: All changes pushed to https://github.com/ewangchong/h1b-friendly-jobs

The repository now has a professional, maintainable structure that will facilitate easier navigation for contributors and users of the H1B Friendly Jobs platform.

Key Files

- /workspace/h1b-friendly-jobs/docs/README.md: Comprehensive documentation index organizing all markdown files by category

- /workspace/h1b-friendly-jobs/README.md: Main project README kept in root directory

- /workspace/h1b-friendly-jobs/docs/: Organized documentation folder containing all 22 technical documentation files
